

**Introduction**

AC-1200 Acrylic Roof Coating and AM-400 Acrylic Mastic are the newest members of the PM Roof Coatings family. Using our state-of-the-art manufacturing facility and premium raw materials, our R&D team developed these products to offer a more robust product line. These products will complement our current roof coatings line and offer a new option for roofs that could benefit from an acrylic coating.

**Why Do the Raw Materials Matter?**

The raw materials of any roof coating are what make or break the final product. It makes perfect sense that using cheaper raw materials would result in a cheaper acrylic roof coating. At PM, we pride ourselves on making only the best products and carried that thought process into our acrylic line. Using the highest quality raw materials, we were able to create an acrylic roof coating that is not only affordable, but offers greater tensile strength, elongation, and overall performance.

**How is Our Resin Better?**

Resin is the backbone of acrylic coatings. Here is what makes our acrylic coatings' resin so impressive:

- Increased solids content improves the final product
- Premium resin provides increased adhesion to nearly all substrates
- Improved dirt pickup resistance keeps roofs bright white and UV reflective
- Improved raw materials result in better elongation, higher tensile strength, and a tougher coating
- Decreased chalk-off rate increases coating life

**AC-1200 Acrylic Roof Coating**

Using our premium raw materials, we've built this formula from the ground up to offer an acrylic roof coating that is second to none. The combination of using the highest quality resin and increasing the solids content of the material means you get the best performance at the best price.

**AM-400 Acrylic Mastic**

With the same principles in mind, we developed this mastic to work in tandem with AC-1200. This thick, easy-to-apply mastic is perfect for prep work on seams and penetrations. It can also work as a stand-alone product for roof repairs. Together with AC-1200, this product offers a new, unprecedented system in acrylic markets.
