

RETROFIT WITH ROOF HUGGER!

PURLIN STRENGTH

Roof Hugger Sub-Purlins Have The Ability To Add Strength To The Existing Purlins. This Is Important Because Most Retrofit Systems Just Add Weight.

ADDED INSULATION

When you install Roof Huggers, the air space between the existing old roof and the bottom side of the new roof is well suited to install insulation for increasing the building's thermal resistance.

SUSTAINABILITY

Roof Hugger's retrofit system is a sustainable solution for upgrading old metal roofs. By allowing the existing roof to remain in place, the system reduces construction waste sent to landfills.

SOLAR PLATFORM

Install photovoltaics without roof penetrations. The new standing seam metal roof is the only long-life roof that will outlast the solar panels saving thousands!
